

## COR PRODUCTS

# TraceCor

TraceCor is a real-time **Inventory Management System (IMS)** that tracks large quantities of assets using smart connectivity labels and wireless tracking technologies such as RFID, Bluetooth, or 5G technology. It enables precise asset and critical component traceability with instant inventory location, relocation, and cycle count audits. TraceCor connects the physical and digital worlds, providing complete visibility and control across complex operations.

### How It Works

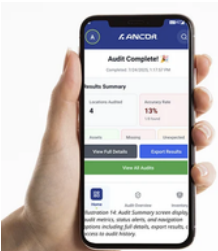

1. Tag assets with a smart label
2. Scan smart label with mobile device
3. Locate, audit and manage assets via App
4. View data in real-time

### Key Features

- Real-time asset tracking
- Interactive facility map
- Mobile app with intuitive UI
- Audit tracking and reports
- Role-based user access
- Works with barcodes, RFID, 5G and Bluetooth

### Why TraceCor

- Reduced Investigation Time
- Improved Accountability
- Scales Across Industries
- Lower Operational Risk
- Minimizes Loss and Human Error

### The TraceCor Advantage

TraceCor helps organizations track critical assets and events across their lifecycle reducing uncertainty, risk, and manual investigation. By centralizing traceability into a single system, TraceCor eliminates blind spots, simplifies audits, and enables faster, more informed decision-making across your entire supply chain.
